

Dear Sponsor of the Hatch/Bert Wasmund Engineering scholarship

I feel relieved to have received your support in my educational journey, moving from a small northern community to Saskatoon to attend the University of Saskatchewan comes with its challenges. I am currently in first year of the new re-engineered program and I am determined to become a civil engineer. Your scholarship has relieved my stress, my purpose for looking for scholarships is to remove any unnecessary obstacles from my studies, I understand I need to place extreme focus in my studies to succeed, one can imagine the workload required to successfully complete an engineering degree.

I would love to give back to my community for all the support they showed when I shared with them my interest in engineering and returning to school. Becoming an engineer would be beneficial for Pinehouse as we continue to take on more challenging work in developing our infrastructure. As a community we have many future plans that will require engineering services, most will be professional buildings such as a new school, clinic, office complex potentially a new COOP store. The potential to build infrastructure and provide services for nearby Industry and the community is exciting.

I am also excited to return to work when I am finished, learning, and staying current in my discipline never ends, I will not stop trying to become better. Once I build on my experience in civil engineering, I hope to be able to extend my services to other communities. Your scholarship enables me to reach my goals, thank you for your generous support.
